

# SHEET 1

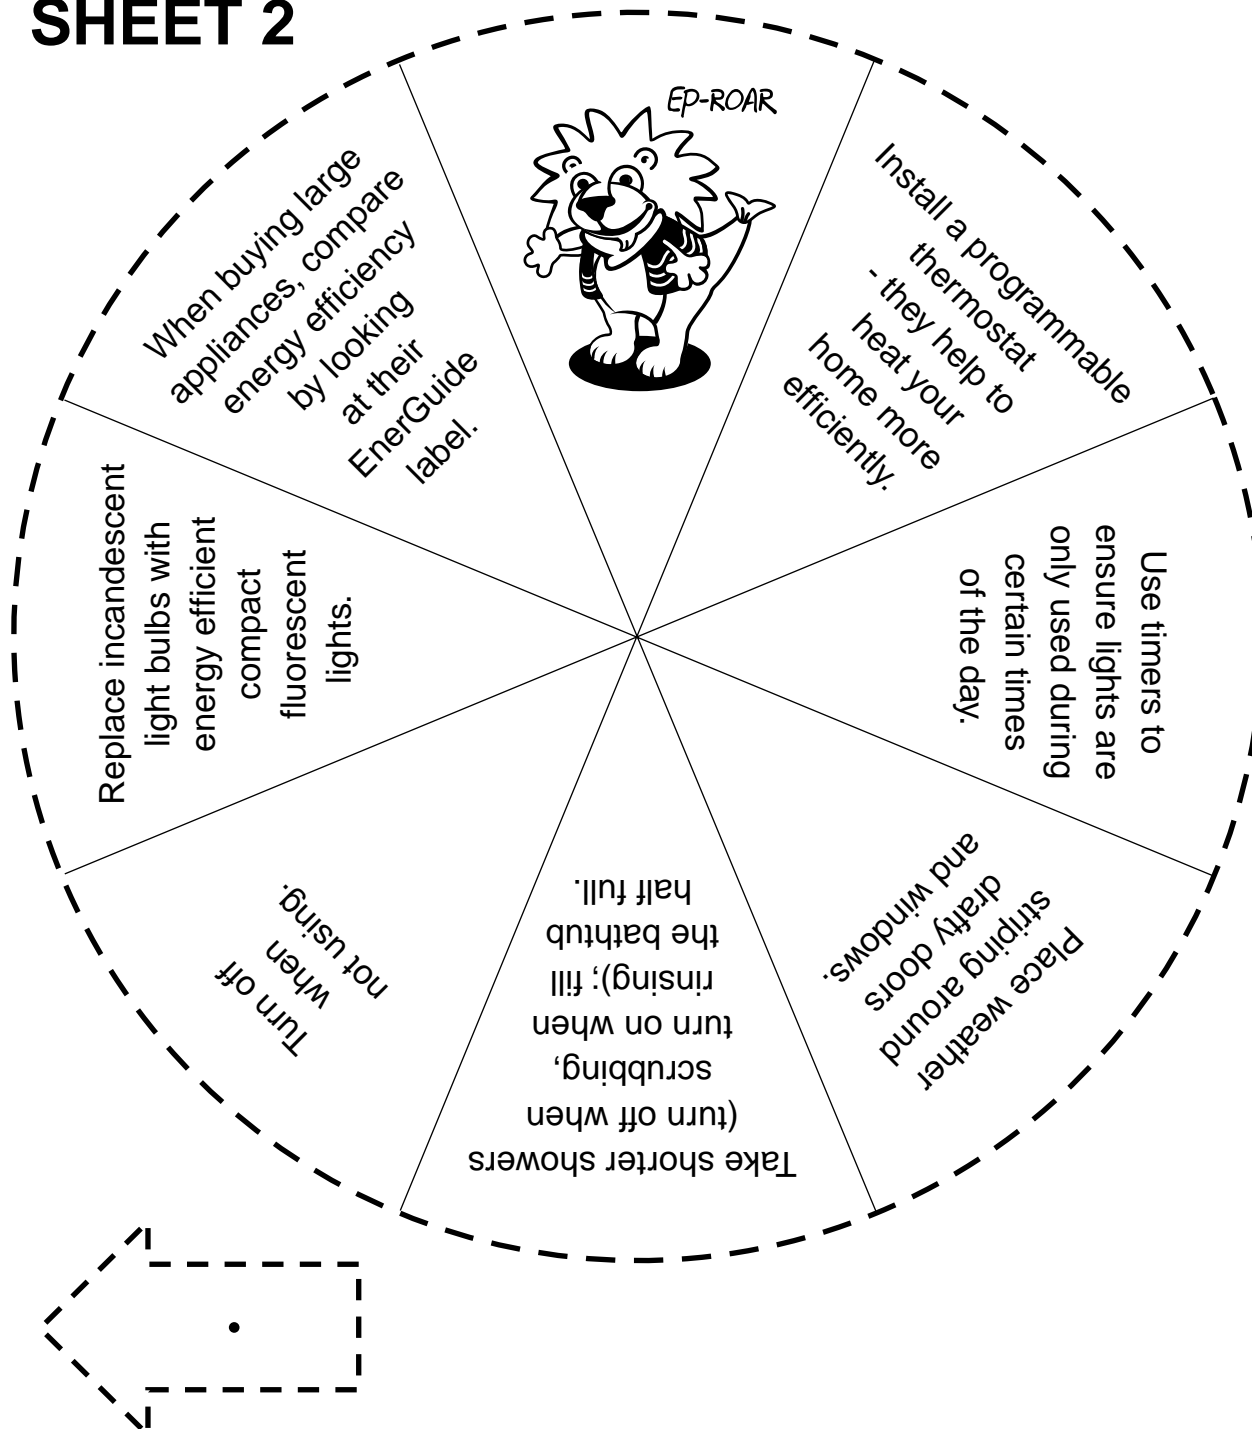

# ENERGY CONSERVATION

Ask EP-ROAR

# SHEET 2

## EP-ROAR knows a lot about energy conservation

Put together the EP-ROAR Wheel to learn some energy conservation tips.

**You'll need a pair of scissors, some clear tape and a 2-Prong Fastener Tack.** (*Tip:* Ask you teacher or parent to help you.)

### INSTRUCTIONS

#### SHEET 1

Cut along the dotted-line path.

#### SHEET 2

Stick a piece of clear tape over the front and back of the arrow.

Cut out the arrow and circle.

To assemble, place the arrow on top, sheet 1 in the middle and the circle at the back (so you can see the text through the opening in the middle piece).

To secure all three pieces, punch the brass fastener tack through the centre of the arrow and centre of the wheel.

**Hint:** Reinforce the centre of the wheel with clear tape before putting the tack on.

Rotate the wheel to see conservation tips. Point the arrow to the picture that matches the text.
